

**NEW**

**STREET  
DRAINS**

Dear business partners,  
we would like to inform you, that we will plan to end production of existing model of street drains.  
Our company Miroslav Chuděj, s. r. o. will gradually replace old model to new improved one, which are designed for draining rain water into sewage system or for collecting the dirt being transported by rain water from the roofs.

The body of street drains is reinforced with ribbing for better stability and strength in the ground.  
It contains an anti-odour dry flap to prevent the odour back flow from the sewage line.  
New system of opening cover is easier and there is better access to removable basket with a handle to sift out dirt.

The street drains are produced in black or grey design, bottom outlet D125 or D110 and side outlet D110.

- ✓ UV stabilized
- ✓ load capacity K3 (300 kg)
