EXTERIOR DRAINAGE CHANNELS

EXTERIOR DRAINAGE CHANNELS

Exterior drainage channels with cast iron, galvanized steel or plastic grates are designed for drainage of civil structures, pedestrian and cyclist areas, driveways, walkways and parking areas. All grates are secured with galvanized screws. The channels are made of PP and are UV stabilized. Cast iron grates comply with DIN 1691 and correspond to load class B125 according to EN 1433 (12,500 kg). Galvanized steel and plastic grates correspond to load class A15 according to EN 1433 (1,500 kg).
